

Quick Start Guide for nearme

1. Install [node.js](#)
2. Run ***npm install -g yo gulp bower***.
3. Go to app folder (Ex: "***cd nearme***") and execute ***bower install*** and ***npm install*** to install all the dev and front-end dependencies.
4. Edit *env-dev.json* and enter your Parse App ID and Server URL, Pushwoosh App ID, AdMob Units ID and Google Analytics Tracking ID.
5. Edit *config.xml* and put your Google Maps API Keys and Facebook App ID/Name.
6. Run ***gulp watch***. This will prepare everything and open your default browser.
7. Run ***gulp --cordova 'prepare'*** to install all cordova platforms and plugins from *config.xml*. In order to use this command, you'll need the platform SDKs for iOS and Android. [See requirements](#).
8. Run ***gulp --cordova 'build ios'*** and ***gulp --cordova 'emulate ios'*** to build and run the app in the iOS simulator. Replace "ios" with "android" to build the app for Android.

That's it!
